LIDAR MATERIAL SOLUTIONS FOR ADVANCED DRIVER ASSISTANCE SYSTEMS

With the trend to embed LiDAR systems within the front and rear fascia of automobiles or within the headlights, ensuring the durability and clarity of these units is paramount. Many MEMS (Micro-Electro-Mechanical Systems) and solid-state LiDAR systems are exposed to adverse weather conditions and road debris making them vulnerable to hot and cold temperatures and impact.

SABIC’s Specialties portfolio of highly engineered thermoplastics offers material solutions to support IR transparency, superior optical quality, high heat resistance and excellent weatherability. SABIC supports the functionality of LiDAR units with unique solutions that offer design freedom, enable laser welding and lead free soldering, provide IR transparency with customizable visual opacity, as well as specialty coatings to boost scratch and UV resistance.

**LENSES COVER & BARREL LENS**

- **LNP™ CXT™ resin** (superior optics, IR transparency, cold temperature impact)
- **ULTEM™ resin** (high heat resistance, weatherability, IR transparency, dimensional stability, lead free solder capable)
- **LNP™ SLX™ resin** (weatherability, superior cold temperature impact, IR transparency)

**MIDDLE PLATE**

- **LNP™ FARADEX™ compound** (EMI Shielding)
- **LNP™ KONDUIT™ compound** (thermal management)

**BACK COVER / SIDE HOUSING**

- **LNP™ THERMOCOMP™ compound** (chemical resistance, rigidity, low warpage, UV stability)
- **LNP™ KONDUIT™ compound** (thermal management)
- **NORYL™ resin** (UV stability, low warpage, low moisture uptake, laser welding)
